

Release Notes for WinRecs 295.3.1

Edits Management Tool (EMT) fix for Version 1.4.1

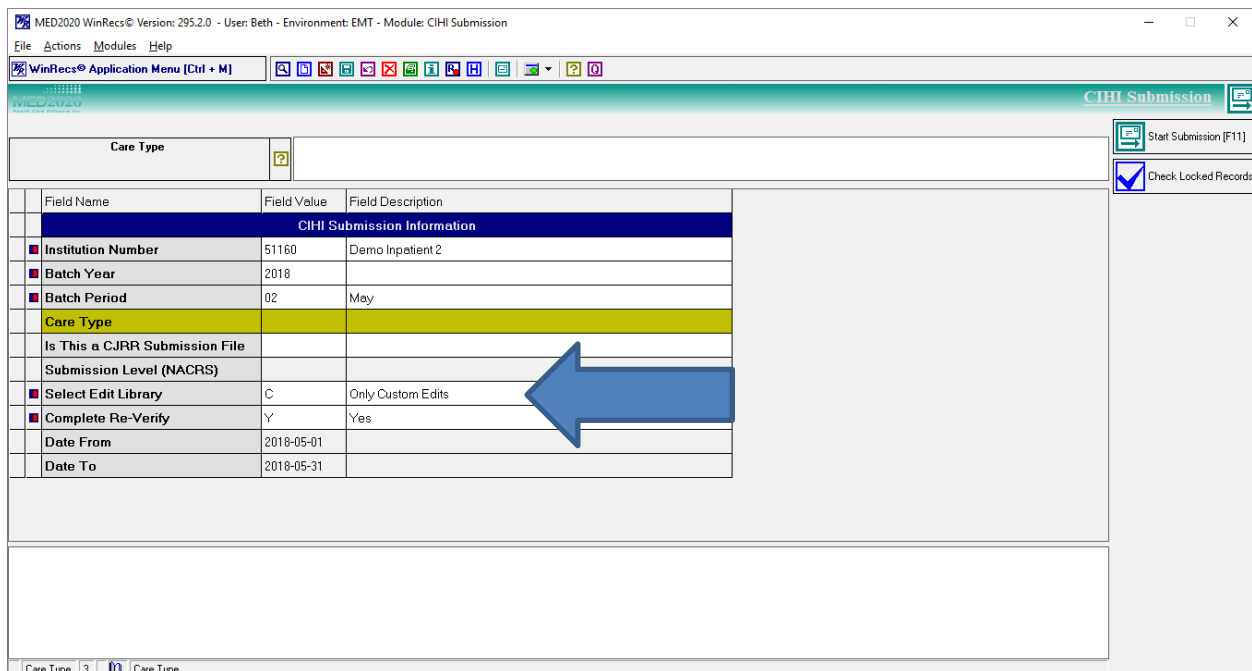

Release Date: January 31, 2019

Winrecs 295.3.1 is compatible with EMT Version 1.4.1. This update is only required for clients that have the Edits Management Tool.

0162

0163 When a logical condition contains fields from a multiform, the edit message would not clear if the fields involved were from the **SAME** occurrence. The function “Same Occurrence” in the Logical Condition has been fixed.

After the update is applied, we recommend to run a Batch Verify in the CIHI Submission to clear the edits that do not apply to the abstracts. When ‘Select Edit Library’ select C-Only Custom Edits.
