

Release Notes for WinRecs Version 2024.01.51

Release Date: April 18, 2024

Version 2024.01.51 will address issues found in the 2024.01 and 2024.01.38 Releases. Please review tickets in the release notes for details.

If the previously posted 2024.01 and 2024.01.38 update has not been run, both can be skipped, and you can go directly to version 2024.01.51.

For additional information on this, or previous releases, contact MED2020 Customer Support at support@med2020.ca

Ticket Details

WinRecs3\Abstracting\NACRS

- PR_22304 NACRS Invalid Generic Institution Numbers Not Generating Error**

Level 3 NACRS was allowing invalid Generic numbers in Intuition to and from fields (example VZZZZ) which resulted in a rejection at CIHI. An edit will now generate in DAD, SDS and NACRS to exclude 99999 and *ZZZZ. NRS and OMHRS will also exclude the use of *ZZZZ Institution Numbers.

- PR_22310 NACRS Incorrect hard edit on Diagnosis code S026**

When Diagnosis Codes S02.6 and S02.21 were entered the following incorrect hard edit generated:
Multiple S026 Diagnoses

- PR_22313 NACRS Incorrect Anaesthetic Technique Edit**

The following hard edit was incorrectly generating for multiple intervention occurrences where one occurrence has a value in the Anaesthetic Technique field: **Anaesthetic Technique Is Mandatory.**

- PR_22325 NACRS Warning W2901 Not Generating**

When Physician Initial Assessment date/time were prior to Registration date/time the following warning did not generate **Physician Initial Assessment prior to Registration suspect**

WinRecs3\Utilities\CIHI Submission

- PR_22323 Incorrect Warning when Running DAD Deletion**

When creating DAD/DAD Day Surgery deletion files the following incorrect warning generated:

There are more than 999 maximum allowed records this batch. This will require a re-run, after this batch is complete, to collect the remaining records.

PR_22324 NACRS Lite Submissions Flag

An issue has been fixed for the NACRS lite submission flag. Previously when records were interfaced as level 1/3 and were saved in the level 0 module, they were not properly being flagged as NACRS lite upon save.

If you find some of your level 0 visits are returning when running a level 3 submission, contact support@med2020.ca for a patch to fix impacted visits.

PR_22327 NRS Submission File name Extra 0 in Sequence

When creating NRS submission files the file name was assigning an extra 0 to the sequence file name. Example, 001 instead of the correct format 01. This has been corrected.

PR_22328 NACRS 3 Correction File: Incorrect Submission Level in Control Header

Level 3 Correction Files had an incorrect submission code level of 2 in the Control Header. This has been corrected and the correct submission code level will be inserted.

PR_22329 NACRS L3 Correction Files Period Closure Control Header

For Submission Level Type D (level 1 and 3) and Submission Level Type E (level 2 and 3 submission), in the correction file the Period Closure Flag in the Control Header was set to 0 and should be 1.

WinRecs3\Abstracting\NRS

PR_22314 NRS Weight Displaying Incorrectly

NRS weights were displaying incorrectly, Example: 52.5 displayed as 525.000. The format value will now display as 052.500.

PR_22315 NRS and OMHRS: Incorrect Attending Physician Hard Error

The following hard edit was displaying in some NRS and OMHRS assessments for valid providers:
The attending Physician has an invalid Value and must be corrected. This error will no longer generate for valid Providers.

PR_22326 NRS Grouper Weight Displaying "0" on 2024 Assessments

NRS Grouper Weight Displaying as 0 on 2024 Assessments. This has been corrected.
